Connectivity & Internet Transit

Connect your users and bandwidth-intensive business applications with our reliable, low-latency, high availability, fibre network.

Our Data Centre has multiple carriers with separate points of entry. Our diversely routed BGP carrier network can provide internet transit speeds up to 1Gb direct to your rack.

Private circuits can be provided to your main business location for direct access. You also have the ability to connect additional network carriers enabling you to work your existing providers.

IPv4 and IPv6 available.

Virtual Dedicated Servers

Keep your business data available and secure with flexible storage and backup services.

Host your servers off-site as part of your disaster recovery plan or create your own private cloud using local private data circuits.

Ideal for organisations that need off-site disaster recovery or physical data centre space for legacy systems and services that can't be migrated to the cloud.

Specification

N+1 redundant infrastructure

Dual-fed substation with UPS
autonomous power

High security lockable racks

Secure underground location

Benefits

Protect your mission critical systems in case of on-premise outage.

Eliminate your data loss risk in case of damage e.g fire or flood to your own premises.

When you relocate your equipment you reduce noise and heat in working spaces, regain the space and save on hidden staffing and utility costs.

Reduce your on-premise bandwidth requirement saves you cost.

Free up your resources for other business activities by offloading routine IT infrastructure tasks and maintenance to our Tier 2 data centre.

Flexible options & bespoke packages available, scale up or down with your needs.

Per 1U - Half rack - Full racks, only buy what you need.
